

STRATEGIC PURCHASING FOR PRIMARY HEALTH CARE

ABOUT SP4PHC

The Strategic Purchasing for Primary Health Care (SP4PHC) project aims to improve how governments purchase primary health care (PHC) services, with a focus on family planning (FP) and maternal, newborn, and child health (MNCH). The project is implemented by ThinkWell in collaboration with government institutions and local research partners in five countries: Burkina Faso, Indonesia, Kenya, the Philippines and Uganda. SP4PHC is supported by a grant from the Bill & Melinda Gates Foundation. The purchasing context in these countries is quite different; large national health insurance schemes cover most of the population in some countries, while ministries of health at the national and sub-national levels dominate the purchasing landscape in others. Across these different geographies, the project is working to strengthen schemes that are critical for improving the delivery of PHC and addressing the needs of the poor, while also improving alignment across different purchasing arrangements within the health system. Through its learning agenda, the project aims to generate and diffuse knowledge about strategic purchasing for PHC to influence policy and practice at the country, regional, and global levels.

SP4PHC

Strategic Purchasing for
Primary Health Care

OUR APPROACH

- We implement strategies tailored to the country context.
- We have country-based teams in each of the five geographies, which are at the forefront of implementing country activities.
- We work with the public purchaser and other relevant government institutions in each of the countries to facilitate policy dialogue on strategic purchasing reforms.
- We use analytics to diagnose existing challenges, design potential solutions, and test the sustainability of those designs through pilot studies.

WHAT IS STRATEGIC PURCHASING?

As countries implement strategies to achieve universal health coverage, they are undertaking health financing reforms to mobilize more financing for health and ensure that available funds for health are used optimally and equitably. Strategic purchasing is linked to the second objective. Purchasing refers to how institutions controlling pooled funds – like ministries of health and health insurance agencies – allocate them to healthcare providers. Making purchasing strategic involves basing purchasing decisions on information about provider behavior and population health needs in order to improve health system performance in terms of equitable access, quality of care and financial protection.

Under Kenya's devolved system of government, counties are the main purchasers of PHC services. They control the bulk of government funds for PHC delivery through public facilities. They also determine whether public facilities can retain and spend any funds they collect from user fees or reimbursements from the National Hospital Insurance Fund (NHIF), the country's social health insurance agency. Against this backdrop, ThinkWell and KEMRI Wellcome Trust are collaborating with the Ministry of Health (MoH) and the Council of Governors to improve how county governments purchase PHC – especially FP and MNCH services – through the following SP4PHC strategies:

STRENGTHENING COUNTY PURCHASING IN 3 FOCUS COUNTIES

SP4PHC is supporting Isiolo, Kilifi and Makueni counties to explore how their purchasing policies and practices create incentives and disincentives for public sector facilities to deliver priority PHC services. The team is collaborating with the county departments of health to design and test policy reforms focused on linking payments to facility performance and improving public financial management policies and practices to grant facilities greater financial autonomy.

LEVERAGING PURCHASING TO PROMOTE QUALITY

SP4PHC is supporting counties to explore approaches for using purchasing to improve the quality of FP and MNCH services. In Isiolo, Kilifi and Makueni counties, the team is working with the county government, facility managers, and other key stakeholders to determine how to improve quality of care through levers of purchasing such as contracting and provider payment.

STRENGTHENING RESULTS-BASED FINANCING TO COUNTIES

Under the Transforming Health Systems for Universal Care (THS-UC) program financed by the Global Financing Facility (GFF), the National Government is providing results-based financing to county governments to improve the delivery of reproductive, maternal, neonatal, child and adolescent health services. SP4PHC is assisting the government's program management team track the overall performance of the program and capture and share county best practices. SP4PHC is supporting Isiolo, Kilifi and Makueni counties to better use THS-UC funds, focused on designing and testing provider payment systems to improve the delivery of FP and MNCH services. The project is documenting lessons about inter-governmental transfers that the THS-UC mechanism offers.

INFLUENCING NATIONAL POLICY DIALOGUE

Through participation in intergovernmental MoH- and Council of Governors-led working groups on health financing and inter-county engagement fora, SP4PHC is sharing learning from its work with counties to inform national dialogue on health purchasing and advocate for harmonization of purchasing schemes.
