MOMENTUM PRIVATE HEALTHCARE DELIVERY

MOMENTUM Private Healthcare Delivery (MPHD) seeks to strengthen private provider contributions to maternal, newborn, and child health; voluntary family planning; and reproductive health care (MNCH/FP/RH). MPHD is part of a suite of USAID projects that accelerate reductions in maternal, newborn, and child mortality and morbidity in high-burden countries. To do this, the project increases host country commitment and capacity to provide high-quality, integrated health care.

ThinkWell is a partner of a global consortium led by Population Services International (PSI). We serve as the technical lead on health financing for sustainability of private sector service delivery.

APPROACH

ThinkWell strengthens private provider engagement with governments through:

1. Facilitating private provider engagement with purchasing
2. Improving the coherence of quality schemes

Governments have not yet systematically leveraged financing mechanisms to improve private-sector MNCH/FP/RH service delivery.
MPHD has four overarching technical priorities to increase availability of and demand for quality MNCH/FP/RH information, services, and supplies offered by private providers and expanded public and private partnerships.

This will help to ensure a total market approach for improved health coverage. These technical priorities encompass how MPHD delivers the overarching MOMENTUM suite of improved MNCH/FP/RH care.

MPHD’s specific priorities reflect important contributions to market-based solutions that support countries’ Journey to Self-Reliance.
